Rolls-Royce Silver Shadow, Silver Shadow II, Silver Wraith II, Corniche, and Camargue  
Bentley T and T2  
1966-1980**

*Instructions:*

Use the following four pages to perform a detailed inspection. Circle nonconforming items as shown in example. When inspection is complete tally the scores for columns "a", "b", and "c" on each page and enter in the inspection totals below.

Example

START AND IDLE	a	b	c
Hard starting cold		5	2
Hard starting warm			
Rough or high idle		2	1
Noisy tappets or brake pumps	2		1
Starter motor noisy	2		1

INSPECTION TOTALS	PAGE 2		PAGE 3		PAGE 4		PAGE 5		TOTAL
Column "a" Total— "Walk Away Now" Score		+		+		+		=	
Column "b" Total— "Honey Dew" Score		+		+		+		=	
Column "c"— "Hidden Neglect" Score		+		+		+		=	

*Interpretation:*

Column "a" is an index of obvious, avoidable, expensive issues. This score multiplied by \$1,000 is roughly the parts cost associated with the issue. In the case of complicated problems, labor cost is also included. Unless everything else in columns "b" and "c" is perfect, vehicles scoring greater than 2 or 3 should be avoided.

Column "b" is an index of relatively simple projects that can be done over time to improve the comfort, driveability and appearance of the vehicle. The total column "b" score represents the estimated number of hours it will take to correct all of the faults identified.

Scores above 400 should be avoided unless you are a glutton for punishment.  
Scores between 100 and 400 are should be manageable for most enthusiasts and should be offered at an average market price. (\$15-20,000 in the U.S., ca. 2006)  
Scores less than 100 are becoming hard to find and are usually priced accordingly!

Column "c" is a qualitative measure of some obvious maintenance procedures that just about any enthusiast familiar with the SY should understand and perform. Avoid vehicles with column "c" scores higher than 10.
